

Report
Of
INTERNSHIP COMPLETION REPORT
ON
PRODUCT MANAGEMENT JOB SIMULATION

Submitted

To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By

Roll Number of Student: :2410031106

Name of Student: DEVANSHI SAINI

Batch: 2024-2028

CANDIDATE'S DECLARATION

I, Devanshi Saini do hereby declare that the internship report titled **“Internship completion report on product management job simulation”** has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Student Name Devanshi Saini

Roll No. 2410031106

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I express my gratitude to my parents for their blessings.

Devanshi Saini

Product Management Job Simulation

Certificate of Completion

August 29th, 2026

Over the period of August 2026, Devanshi Saini has completed practical tasks in:

Understanding Product Performance
Planning a Stakeholder Presentation

Tom Brunskill
Co-Founder of Forage

4. PROJECT DESCRIPTION

4.1 Introduction

Product management is a critical function bridging engineering, design, and business strategy to deliver impactful products. This report details my experience completing a Product Management Job Simulation via Forage in August 2026. The simulation provided practical exposure to daily tasks performed by product managers, requiring analytical thinking and structured communication.

4.2 Organization Profile

Forage is a pioneering educational technology platform that partners with top global corporations to create virtual work experience programs. These programs simulate real-world corporate tasks, empowering emerging professionals to build relevant skills, understand organizational workflows, and enhance their employability in highly competitive sectors like product management.

4.3 Problem Statement

In modern product development, teams often struggle to derive actionable insights from raw product performance data and subsequently fail to communicate project strategies clearly to non-technical stakeholders. The core problem addressed in this simulation was twofold: accurately interpreting product usage metrics and structuring a compelling project plan to secure stakeholder alignment.

4.4 Project Objectives

The primary objectives of this internship were:

- To analyze product performance datasets and identify key trends.
- To formulate actionable recommendations based on quantitative data.
- To develop a comprehensive project plan structured specifically for a stakeholder presentation.

- To master the translation of complex product data into executive summaries.

4.5 Scope of the Project

The scope of this virtual simulation was limited to two major practical tasks: Understanding Product Performance and Planning a Stakeholder Presentation. It involved analyzing provided mock data sets, simulating the product lifecycle planning phase, and drafting presentation outlines. It did not involve live software development or direct customer interactions.

4.6 Technologies and Tools Used

- Spreadsheet Software (Microsoft Excel / Google Sheets) for data analysis.
- Project Management Templates for presentation planning.
- Data Visualization techniques for reporting metrics.

4.7 System Architecture

While software engineering relies on technical architecture, product management relies on Information Architecture and workflow systems. The operational flow utilized during this project was: Data Ingestion (Reviewing raw product metrics) Analytical Processing (Identifying performance bottlenecks) Strategic Synthesis (Drafting solutions) Presentation Framing (Structuring the stakeholder deck).

4.8 Methodology

An iterative analytical methodology was adopted. For the first module, data was cleaned, sorted, and evaluated against standard product KPIs (Key Performance Indicators). In the second module, a top-down approach was used to build the presentation plan: establishing the core objective first, confirming available findings, and finally organizing insights into a logical presentation storyboard.

4.9 Expected Outcomes

The expected deliverables from this simulation were a synthesized evaluation of product performance metrics and a complete, structured timeline/plan for a stakeholder presentation, ensuring all business objectives and dependencies were accurately mapped.

4.10 Certificates of Completion and Other Proofs

Enrolment Verification Code 6a9318d96ecab27e0ea6681d

User Verification Code 6a9315bd2eef4b8fc013fe5d
